

Colour On Maps Project

Achromatic + 1. Futuristic

When I think of "futuristic" my mind instantly goes to The Matrix and computers. For my style I took inspiration from green text on black background from classic computers and the "digital rain" effect from the movie. The roads had to be a lighter tint so it does not clash with the land outline. For the font I chose the Orbitron font because I feel that the geometric style gives it a techy and futuristic feeling. I intentionally chose not to curve text for water features and trails to maintain the blocky feeling created by the chosen font.

This map is produced as a portion of the requirements of the GIS: Cartography and Geovisualization program of the Centre of Geographic Sciences, NSCC, Lawrencetown, Nova Scotia. The product is unedited, unverified and intended for educational purposes only.

Complimentary - Rustic

For this style I was inspired by the "stained paper effect" you see on old maps. Blue also happens to be the complimentary colour of the brown on those types of maps, which works out well here because I have a lot of water in this map. I also a water ripple effect because I felt it would be thematically appropriate, and make the map stand out more from the other two. The font is Cheddar Gothic which I chose because it gave felt like the type of font you would see on old West map from the 19th century.

CRTY1003 - Map Design and Geovisualization

Full Colour - Contemporary

My intention for this map was to create a map that you would see at a real provincial park. I made use of colours for the polygon and line features that somewhat resemble their real-world counterparts. For some point features I used colour to differentiate the campgrounds based on the utilities they offer. The font I used is Century Gothic which I used because it is easy to read and utilitarian in its design. I think it would be a good font to use on a real map of the park and thus it matches what I want to accomplish with this map.
